Wisconsin from Space

Fall

October 8, 10, & 12, 2003 (composite)

NASA's Terra and Aqua satellites acquire daily imagery of the Earth with a sensor called MODIS. This image of Wisconsin, Lake Michigan, and Lake Superior was collected at the UW-Madison SSIC-ERSC direct reception facility. Researchers and educators at ERSC use state-of-the-art remote sensing imagery and geospatial information technologies to address the pressing environmental issues of our time and to teach environmental monitoring techniques through a graduate degree program.
